

# PICK2PALLET™ LED LIGHT SYSTEM

INCREASE PICKING ACCURACY.  
BOOST PRODUCTIVITY.

While batch picking orders can boost productivity up to 20% over single order picking it can also increase the risk of pick errors caused by placing product on the wrong customer order.

The Pick2Pallet™ LED Light System, offered exclusively by The Raymond Corporation, is designed to help reduce picking errors by using LED technology to visually reinforce product placement for order fulfillment in batch picking applications. Pick2Pallet maximizes operator productivity by directing operators to the desired customer pallet — enabling them to quickly move to the next pick with confidence.

CUSTOMERS USING THE PICK2PALLET OPTION HAVE EXPERIENCED UP TO

**20%** & **25%**

PRODUCTIVITY INCREASE

ERROR REDUCTION RATE

IN THEIR BATCH LOW LEVEL ORDER PICKING APPLICATIONS.

## HOW IT WORKS:

**CUSTOMER  
WAREHOUSE MANAGEMENT  
SOFTWARE (WMS)**

**VOICE PICK EQUIPMENT**  
WMS sends pick  
instructions to voice pick  
equipment

Voice Pick receiver  
tells the operator:  
• where to go  
• what part to pick  
• how many pieces to pick  
• which customer pallet  
to place the product on

WMS through Voice Pick  
receiver tells the  
Raymond 8410 or 8510  
PalletTruck which position  
to light up or shut off

Operator responds task  
complete to move to  
next pick

Operator "Task Complete"  
signals truck to turn light  
off and move to next pick

**RAYMOND**

## FEATURES & BENEFITS

- + Reduce misplacement of product by providing visual direction for where to place the product.
- + Long lasting LED lights embedded in the forks include a life expectancy of +20,000 hours<sup>1</sup>.
- + Durable light kits embedded in the forks feature IP65 protection to electronics for reliable performance in wet and cold storage applications.
- + Removable light covers simplify maintenance and provide easy access.
- + Best pallet positioning visibility when using plastic cone leg pallets. Wood pallets also provide adequate light.
